Hydraulic crimp systems

Elpress hydraulic crimp systems fit Elpress terminals and connectors from 10 to 1200 mm². The systems are constituted by either pumps and crimp heads which can be freely combined or by complete hand held tools where these functions are intergrated. For crimping, pre-rounding of sectorised conductors, cable cutting, etc. there are a variety of accessories. Together with matching terminals the complete crimp system is formed. Both pumps and manual tools have, with a few exceptions, fast feed function that allows the actual crimping to start after the dies have rapidly been brought in contact with the terminal. There is also a full-closure function to safe-guard a complete crimp action. To meet special ergonomic requirements Elpress has also developed crimp heads made from titanium - a material with about half the specific weight of steel. The standard pumps are used and the system makes work in difficult environments considerably more comfortable.

The PS700 is a new example of innovative thinking, where there is a free choice between 230VAC mains or 24 VDC battery powered operation combined with advanced monitoring and control features, see page 9:38.
