What is a **Cable Gland**

A Cable Gland is, in simple terms, a device designed to attach and secure a cable to a piece of equipment or enclosure.

A Cable Gland provides strain relief and can include a provision for making a connection to the armour, braid, lead or aluminium sheath of the cable. For unarmoured and braided cables, this strain relief is provided by the seal only. For armoured cables the armour and clamp can also provide the pull out resistance. In hazardous areas, cable glands are also used to maintain the protection concept of the equipment or enclosure into which they are being terminated – in most instances Exe or Exd.

Why specify cable glands?

A poorly installed cable gland, or the incorrect gland chosen for a specific cable/application can become the weak link in the chain, whereas it should preserve the integrity of the overall installation. Whilst the cost of cable glands is insignificant compared to that of other hazardous area equipment, the cost of failure can be catastrophic.

Failure can take many forms and include:

- Water or dust ingress into the equipment
- Cable properties compromised
- Damage to the cable which can lead to explosion risk
- Cables becoming loose from equipment
- Electric shock risk
- Equipment failure
- Failure to meet essential HSE requirements

Why choose **Hawke** Cable Glands

All Hawke International cable glands meet, and in most cases exceed, the test requirements for products used in potentially hazardous areas. With over 60 years of experience manufacturing cable termination products for the most arduous environments, and a reputation built off safety and reliability, Hawke International cable glands offer the safest, most cost-effective glanding product available today. Plus, our global network of offices and distribution partners offers unrivalled technical support, giving peace of mind to installers and owners alike.

Certifications Explained

Whilst many standards aim to unify the testing and design requirements for Hazardous Area cable glands, national or international codes of practice and standards may differ in their approach and testing requirements. Hawke International aims to ensure all its products are globally certified wherever possible.

However, we are not happy simply to pass the tests as dictated by the various standards but will always aim to meet and exceed these requirements with the user in mind, striking a balance between meeting the essential test requirements and offering the safest and simplest product for installers and users in real world applications not mirrored by the tests.

See below for a list of our certifications.

Cable Gland **Tightening Guide**

To help address issues with the overtightening of cable glands and the resultant damage to cables and seals, Hawke International has developed the patented **Inbuilt Tightening Guide.**

Without the need for fiddly measuring systems, the guide provides a permanent visual indication of the gland tightness through installation, inspection and maintenance.

Whilst Hawke International goes to great lengths to ensure products are designed to be as simple to install, inspect and maintain as is possible, differing levels of competency, training and understanding can lead to glands being incorrectly installed. With hazardous area products, any poor installation issues can not only lead to expensive equipment failure, but also potential explosion risks and associated risk to life.

How it works

The gland is permanently marked with various lines/numbers indicating the correct tightening level related to the cable diameter. Following the relevant cable gland Installation Instructions, the back seal should be tightened until a seal is formed on the cable outer sheath and then tightened one further turn.

Step 1

Follow cable gland installation instructions until final stage – tightening of rear seal

Step 2

Tighten backnut until a seal is formed onto the cable, then tighten one further turn

Step 3

The backnut should be level with the marking guide corresponding to its diameter – this can be visually inspected and adjusted as necessary

Note: The cable gland installation instructions have a printed cable OD measure for if the cable OD is not known

Cold flow Compliant Cable Gland

Cold flow, or creep as it is referred to in material science, is the tendency of any solid material to move or deform over a period of time under the influence of mechanical stresses.

Although temperature and various other environmental factors impact cold flow, materials such as plastics and rubbers will begin to creep at room temperature. Cable gland manufacturers can help to negate the impact of cold flow through the reduction of load stresses on the cable itself.

The polymer sealing element found in most hazardous area cable glands will only form an effective seal on a cable when compressed or displaced through the action of tightening opposing components of a cable gland. This force applied to the seal either compresses or displaces the sealing face of the seal onto the cable inner sheath. In either case, the force applied in tightening the gland is transferred through this sealing element and on to the inner sheath of the cable.

This force can cause cold flow where the cable inner sheath may move away from the seal and create a possible path for gas or flame propagation in the event of an explosion.

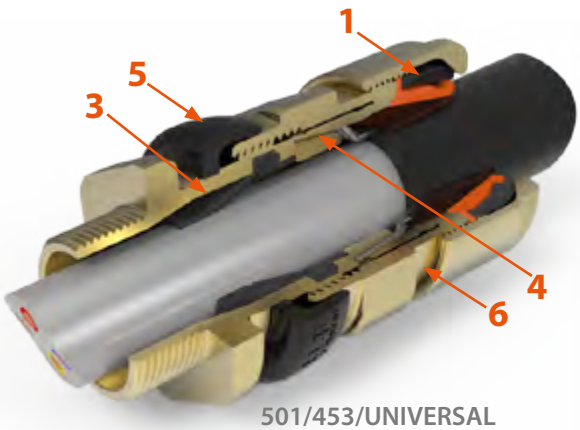
501/453/UNIVERSAL

The only known **independently tested non-barrier gland <u>proven</u> to not cause damage to cables**

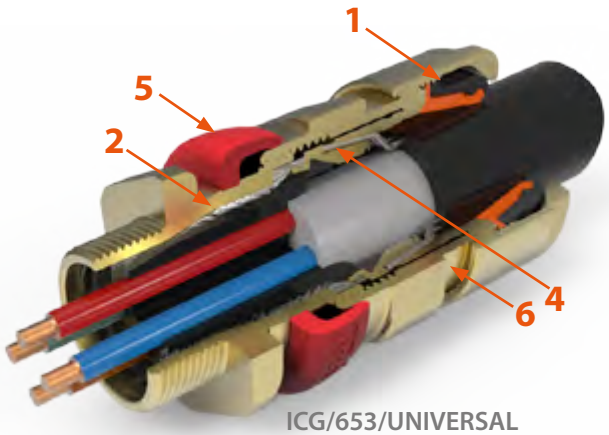
and to meet the Essential Safety and Health Requirements when fitted to an actual cable – *not* a solid stainless steel test mandrel.

Visit www.harshandhazardous.com/coldflow to find out more.

Features



501/453/UNIVERSAL



ICG/653/UNIVERSAL

1 Unique Rear Sealing System

This arrangement offers IP66, IP67, IP68 (30 metres for 7 days) IP69*, NEMA 4X and Deluge (DTS01) Ingress Protection. The seal is manufactured from a silicone material, has LSFZH properties, is ozone and oil resistant and is suitable for use at both high and low temperatures. The Rear Sealing System covers the entire range of cable diameters without the need for special seals and the cable acceptance range is stamped on the backnut for ease of inspection. The backnut can be hand tightened, with only one further spanner turn required to ensure IP66, IP67, IP68, IP69 and NEMA 4X.

2 Unique Inspectable Compound Chamber

The revolutionary Hawke compound chamber has been designed with inspectability in mind. With a unique clear non-metallic compound chamber for both IEC and NEC application, the barrier seal can be made using either a QSP quick setting 2-part hand-mixed putty, or a liquid injectable and fast curing resin, allowing for faster installation time than traditional 2-part compounds. The transparent compound chamber allows full visibility of the flameproof seal during installation and inspection making the ExPress barrier resin unparalleled as a global solution.

3 Zero Cable Damage

The unique Hawke diaphragm sealing system does not damage cable which exhibits 'Cold Flow' characteristics. The diaphragm type seal is the only elastomeric seal to comply fully with IEC/EN 60079-14 and is therefore suitable on effectively filled 'cold flow' cables which would otherwise require barrier style cable glands. The Hawke diaphragm seal is also unique in that it is the only flameproof elastomeric seal that can be visually inspected in operation – a real benefit to inspectors.

4 The Original Reversible Armour Clamp

The original RAC clamping system was invented by Hawke over 10 years ago and is a well established proven performer in all conditions. Simply by reversing the clamping ring, the cable gland can adjust to accommodate all types of cable armour or braid. Unlike many of our competitors, the correct stamping orientation is marked clearly with the armour size and backed up by the presence of a groove in the component. Hawke's RAC clamping system is also fully Inspectable when positioned on the cable.

5 Inspectable Deluge Seal

Hawke's Inspectable deluge seal offers IP66 and IP67 sealing and is certified as 'deluge proof' by ITS in accordance with DTS01. In fact, Hawke's deluge seal is so good that it exceeds the expectations of the offshore industry by not only preventing ingress into the equipment, but also into the cable gland, which prevents corrosion of the cable armour.

6 Cable Tightening Guide

To help address issues with the overtightening of cable glands and the resultant damage to cables and seals, Hawke International has developed the patented INBUILT TIGHTENING GUIDE. Without the need for fiddly measuring systems, the guide provides a permanent visual indication of the gland tightness through installation, inspection and maintenance. The gland is permanently marked with various lines/numbers indicating the correct tightening level related to the cable diameter. The backnut, once tightened to the line corresponding to the cable diameter, ensures there is no cable damage whilst still maintaining IP and pull-out.

**for all glands with a Hawke Deluge Boot*

The only **"upgradeable" Exd gland** in the world

The **501/453/UNIVERSAL** cable gland offers installers the unique opportunity to upgrade the diaphragm seal, meant for use on effectively filled cable inner sheath's, to a barrier type gland, whereby a seal is formed around each individual cable core. This offers the user the ability to **purchase just one Exd gland** for both their standard, and barrier gland requirements.

The **ExPress barrier kit** provides the user with everything required to change the patented diaphragm seal found in the **501/453/UNIVERSAL** to the patented compound seal found in the **ICG/653/UNIVERSAL**. This flexibility is unrivalled and offers unparalleled cost savings, flexibility and peace of mind.
See Page 10 for order details.

BARRIER Upgrade Kits

One gland – two applications

The **501/453/UNIVERSAL** gland has been a market leading Ex cable gland for 2 decades, but the latest version truly lives up to its **UNIVERSAL** name.

The **501/453/UNIVERSAL** gland still utilises the industry leading internal diaphragm seal to meet the explosion requirements of Exd whilst also helping to prevent cold flow in cables. The **501/453/UNIVERSAL** offers installers the unique opportunity to upgrade the diaphragm seal, meant for use on effectively filled cable inner sheath's, to a barrier type gland, whereby a seal is formed around each individual cable core.

The upgrade kits are available in both **QSP** and **Ex**Press versions and come with everything needed to turn the 501/453/UNIVERSAL into the ICG/653/UNIVERSAL gland. This offers the user the ability to purchase just one Exd gland for both their standard, and barrier gland requirements.

This flexibility is unrivalled and offers unparalleled cost saving and peace of mind.

QSP 2-part hand mix putty - simple to use with a cure time from 30 minutes. Particularly useful where termination space is limited or cables are running horizontally to the installation area. Can be inspected and repaired if necessary, allowing for the very highest level of safety.

ExPress **barrier resin** - a globally certified, liquid injectable and fast curing resin, allowing for faster installation time than traditional 2-part compounds. Utilising a unique clear compound chamber allowing full visibility of the flameproof seal during installation and inspection.

Ordering Information

Format for ordering is as follows:

Product type	Resin type	Size*	Material**
Conversion pack	QSP	A	NP (Nickel Plate)
Conversion pack	**Ex**Press Resin	A	Brass

*Ordering Example: Conversion Pack/ **Ex**Press / A / NP*

** To match the size of the 501/453/UNIV you want to convert to a ICG653/UNIV*
*** To match the material of the 501/453/UNIV you want to convert to a ICG653/UNIV*

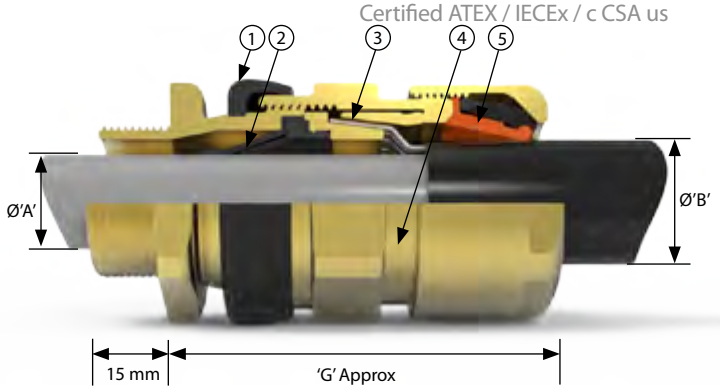
MADE IN BRITAIN

- 1 Inspectable Deluge Seal
  - Offering IP66, IP67, IP68 & IP69 Ingress Protection
- 2 Passive diaphragm seal
  - Suitable for cables exhibiting 'Cold Flow.' Fully inspectable
- 3 Reversible Armour Clamp - For all types of armour and braid
- 4 Patented Cable Gland Tightening Guide
  - Helps prevent damage caused by over tightening
- 5 Unique Rear Seal - Offering ultimate sealing over an extremely wide cable acceptance range



International Approvals

The 501/453 Universal Cable Gland is dual certified Exe/Exd, robust and for use with single wire armour 'W', wire braid 'X', steel tape armour 'Z', elastomer and plastic insulated cables. For particular use with cables that exhibit 'Cold Flow' characteristics. This cable gland is the first and only cable gland capable of being upgraded to a barrier type solution in the field. See below for more details. See technical section for installation rules and regulations.

Ordering Information

Format for ordering is as follows: Alternative Seal (AR), add suffix AR to ordering information

Cable Gland Type	Size	Thread	Barrier Type	Material	(Optional)
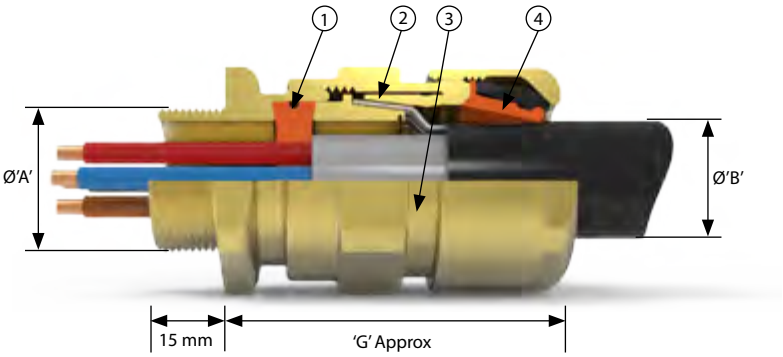
ICG 653/UNIV/L	C	M32	(Standard 2 part compound)	Brass	AR
ICG 653/UNIV/L	C	1¼"	EP (ExPress Resin)	Brass	AR

Two part sealing compound and assembly instructions are supplied with the cable gland
Example Code: ICG 653/UNIV /L C M32 EP Stainless Steel

MADE IN BRITAIN

PSG 553 RAC

Flameproof Exd & Increased Safety Exe
Dual Certified ATEX / IECEx



- **1** Provides a barrier seal to the individual insulated cores within the cable and prevents entry of the products of an explosion into the cable. The required number of holes for the cores are punched in the seal by a special tool to suit core size
- **2** Provides armour clamping using one clamping arrangement for all armour/braid types
- **3** Provides a cable retention and low smoke and fume, zero halogen seal onto the cables outer sheath

The PGS/553/RAC dual certified Exe/Exd gland offers an instant barrier seal around the individual cable cores, with the silicon seal forming a barrier around the individual cores of a cable. This results in unparalleled speed of installation, inspection and flexibility, with no need for compounds or resin to achieve the Exd barrier seal, no curing time and instant gland completion.

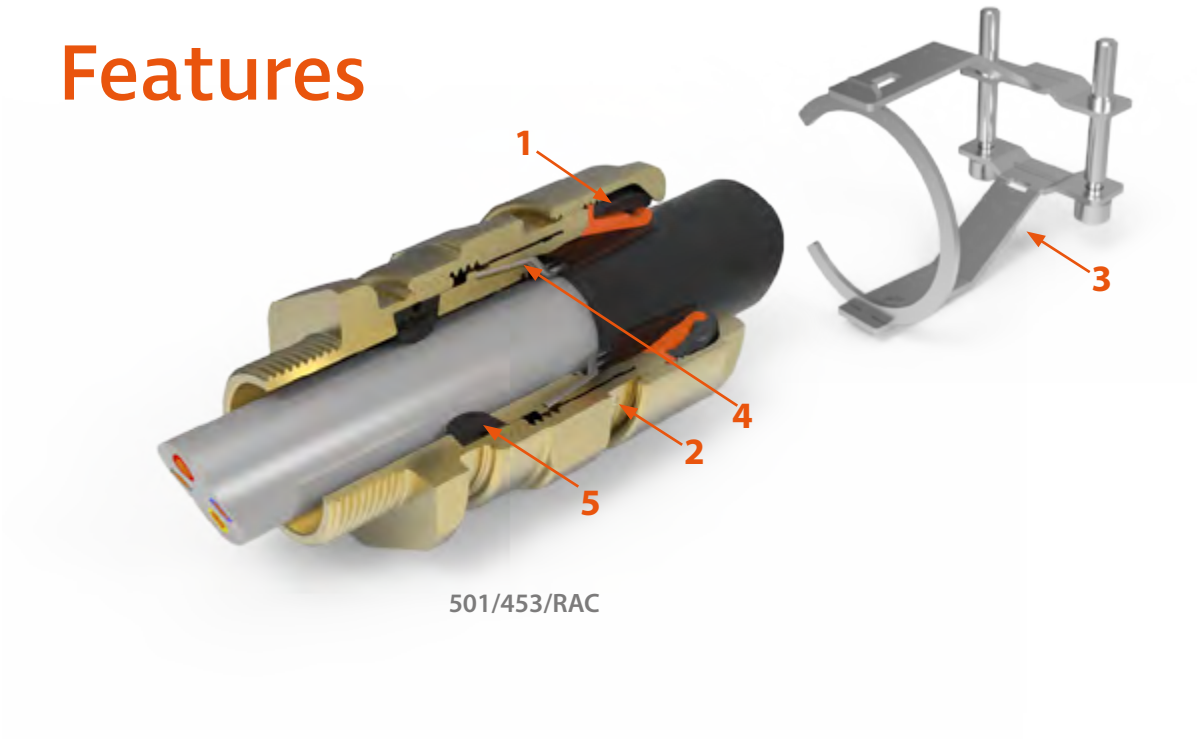
Compression Glands

A compression gland utilises a polymer sealing element to seal on the inner sheath, outer sheath, or both inner and outer sheath's. It is used to protect against water and dust ingress, secure the cable to equipment and in some cases, provide explosion protection in the event of an ignition.

Features



501/453/RAC

1 Unique Rear Sealing System

This arrangement offers IP66, IP67, IP68 (30 metres for 7 days), NEMA 4X and Deluge (DTS01) Ingress Protection. The seal is manufactured from a silicone material, has LSFZH properties, is ozone and oil resistant and is suitable for use at both high and low temperatures. The Rear Sealing System covers the entire range of cable diameters without the need for special seals and the cable acceptance range is stamped on the backnut for ease of inspection. The backnut can be hand tightened, with only one further spanner turn required to ensure IP66, IP67, IP68 and NEMA 4X.

2 Cable Tightening Guide

To help address issues with the overtightening of cable glands and the resultant damage to cables and seals, Hawke International has developed the patented INBUILT TIGHTENING GUIDE. Removing the need for fiddly measuring systems, the guide provides a permanent visual indication of the gland tightness through installation, inspection and maintenance. The gland is permanently marked with various lines/numbers indicating the correct tightening level related to the cable diameter. The backnut, once tightened to the line corresponding to the cable diameter, ensures there is no cable damage whilst still maintaining IP and pull-out.

3 100% Pull-Out Clamp (optional)

All Hawke Cable glands can be fitted with the optional 100% pull-out clamp. This cost effective solution removes the need to separately clamp/cleat cable, by taking care of this requirement as part of the gland assembly. Unlike other manufacturers, who utilise the rear ingress protection seal to offer pull-out resistance, the Hawke pull-out clamp keeps these 2 functions separate, ensuring neither is compromised and both components act independently.

4 The Original Reversible Armour Clamp

The original RAC clamping system was invented by Hawke over 10 years ago and is a well established proven performer in all conditions. Simply by reversing the clamping ring, the cable gland can adjust to accommodate all types of cable armour or braid. Unlike many of our competitors, the correct stamping orientation is marked clearly with the armour size and backed up by the presence of a groove in the component. Hawke's RAC clamping system is also fully Inspectable when positioned on the cable.

5 Thermoset (TSE) Compression Seal

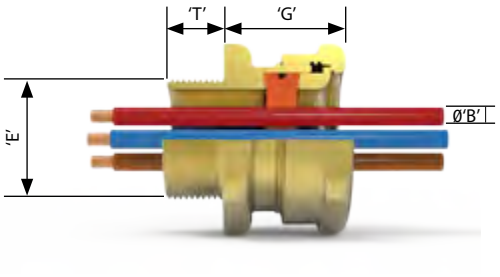
Cross-linked (vulcanised) during the moulding process with the application of heat and pressure. Once formed, they will not 'melt' and will exhibit optimum sealing properties over a wide range of temperatures as well as recovery from deformation (compression set).

PSG/421

Flameproof, Increased Safety, Dust Protection
Certified ATEX / IECEx

MADE IN BRITAIN

- Allows the termination of multiple unarmoured cables into one singular cable entry
- The required number of holes for the cores are punched in the seal by a special tool to suit the core size



International Approvals

The PSG/421 dual certified Exe/Exd gland offers an instant barrier seal around individual cables, with each silicone seal accepting a wide variance of cable diameters. This results in unparalleled speed of installation, inspection and flexibility, with no need for compounds or resin to achieve the Exd barrier seal, no curing time and instant gland completion. Each gland allows for multiple cables to be fitted into a single entry

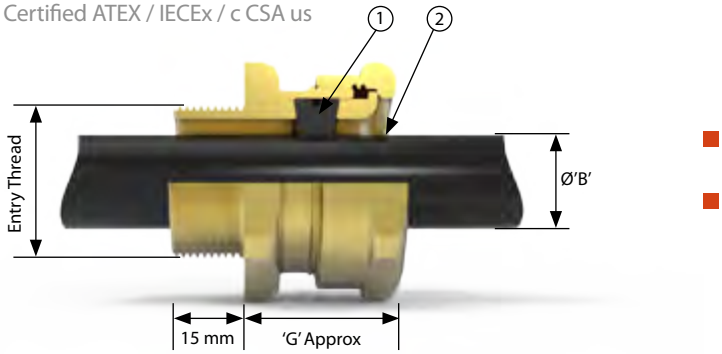
MADE IN BRITAIN

International Approvals

501/421

Flameproof, Increased Safety, Dust Protection
Class - Zones
Certified ATEX / IECEx / c CSA us



- 1 Elastomeric Exd flameproof and Exe Increased Safety seal on cable outer sheath
- 2 Rounded Cable entry to prevent cable damage

The 501/421 dual certified Exe/Exd cable gland is intended for use on non-armoured elastomer and plastic insulated cables.
This cable gland may be used with braided cables where the braid and outer sheath pass into the enclosure.
The braid must then be suitably terminated inside the enclosure. For Exd applications, the cable must be suitable in compliance with with BS EN 60079-14.

Ordering Information

Format for ordering is as follows: Alternative Seal (S), Alternative Ring (AR), add suffix S and/or AR to ordering information

Cable Gland Type	Size	Thread	Material	(Optional)
501/453/RAC	C	M32	Brass	AR
501/453/RAC	C	1¼" NPT	Brass	S

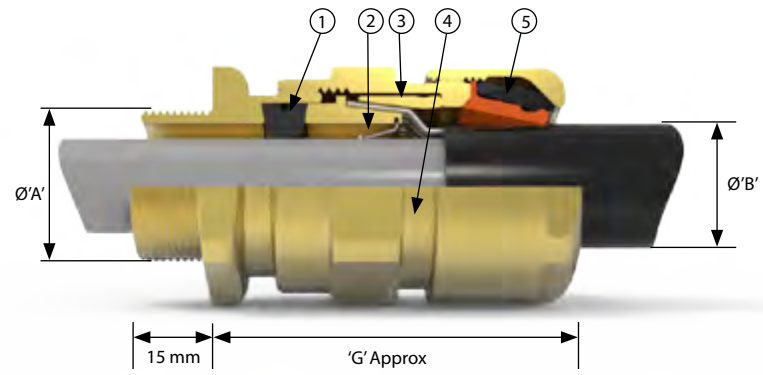
Order Example: 501/453/RAC C M32 BRASS AR

MADE IN BRITAIN

International Approvals

501/453/RAC/L

Flameproof, Increased Safety, Dust Protection
Class - Zones Certified ATEX / IECEx / c CSA us
For Lead Sheath Cables



- 1 Elastomeric Exd flameproof seal on cable inner sheath
- 2 Reversible Armour Clamp
  - For all types of armour and braid
- 3 Patented Cable Gland Tightening Guide
  - Helps prevent damage caused by over tightening
- 4 Unique Rear Seal - Offering ultimate sealing over an extremely wide cable acceptance range

The 501/453/RAC Cable Gland is dual certified Exe/Exd, robust and for use with single wire armour 'W', wire braid 'X', steel tape armour 'Z', elastomer and plastic insulated cables. The gland provides an elastomeric seal on the cable inner sheath, and a low smoke, zero halogen IP and retention seal onto the cable outer sheath. See technical section for installation rules and regulations.

Os - F size metric entry threads are 1.5mm pitch as standard, 15mm length of thread. For G size glands and above, a 2mm pitch is supplied as standard, 20mm length of thread (1.5mm pitch with 15mm length of thread can be supplied) please specify when ordering. All dimensions in milimetres (except * where dimensions are in inches)

[1] Smaller value is applicable when selecting reduced NPT entry option.
[2] Size O is available with an M16 thread size. For O size with M16 thread, the maximum cable outer sheath diameter is 10.9mm

Brass NPT entries are nickel plated as standard.

HUBBELL Harsh & Hazardous

Barrier Glands

A barrier gland is a cable gland that provides a seal around the individual cores of a cable to maintain the flameproof integrity of Exd equipment.

These glands meet the requirements of IEC 60079-1 and employ a compound seal, or other sealing method, around each core to prevent the migration of an explosion from within a piece of flameproof equipment to the outside atmosphere.

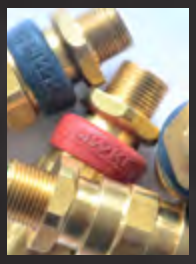
Hawke International has a comprehensive, and UNIQUE range of barrier glands offering numerous features and benefits not to be found from other manufacturers.

3 Seal Options - ALL FULLY INSPECTABLE!

Hawke International is the ***only*** cable gland manufacturer to offer 3 solutions to Exd barrier glanding:

● QSP 2-part Hand Mix Putty

Simple to use with a cure time from 30 minutes. Particularly useful where termination space is limited or cables are running horizontally to the installation area. Can be inspected and repaired if necessary, allowing for the very highest level of safety.



● ExPress Barrier Resin

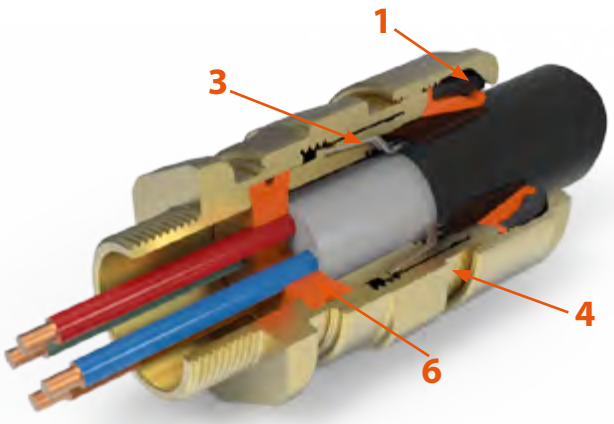
A liquid injectable and fast curing resin, allowing for faster installation time than traditional 2-part compounds. Utilising a unique clear compound chamber for full visibility of the flameproof seal during installation and inspection, the ExPress barrier resin is unparalleled as a global solution, with a 30 minute gel time and unrivalled ease of use.

● Instant Barrier Seal

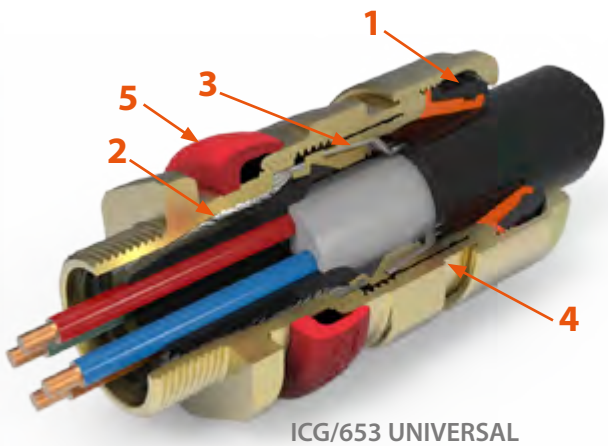
No resin. No mixing. No cure time.

The PSG553 RAC (Punched Seal Gland) provides market leading installation and inspection time. Simply pass the individual cores through the punched seal and tighten. Fully inspectable and no waiting time – irrespective of temperature, location or installation position.

Features



PSG/553/RAC



ICG/653 UNIVERSAL

1 Unique Rear Sealing System

This arrangement offers IP66, IP67, IP68 (30 metres for 7 days) IP69 (for all glands with a deluge boot), NEMA 4X and Deluge (DTS01) Ingress Protection. The seal is manufactured from a silicone material, has LSFZH properties, is ozone and oil resistant and is suitable for use at both high and low temperatures. The Rear Sealing System covers the entire range of cable diameters without the need for special seals and the cable acceptance range is stamped on the backnut for ease of inspection. The backnut can be hand tightened, with only one further spanner turn required to ensure IP66, IP67, IP68 and NEMA 4X.

2 Unique Inspectable Compound Chamber

The revolutionary Hawke compound chamber has been designed with inspectability in mind. With a unique clear non-metallic compound chamber for both IEC and NEC applications, the barrier seal can be made using either a QSP quick setting 2-part hand-mixed putty, or a liquid injectable and fast curing resin, allowing for faster installation time than traditional 2-part compounds. The transparent compound chamber allows full visibility of the flameproof seal during installation and inspection making the ExPress barrier resin unparalleled as a global solution.

3 The Original Reversible Armour Clamp

The original RAC clamping system was invented by Hawke over 10 years ago and is a well established proven performer in all conditions. Simply by reversing the clamping ring, the cable gland can adjust to accommodate all types of cable armour or braid. Unlike many of our competitors, the correct stamping orientation is marked clearly with the armour size and backed up by the presence of a groove in the component. Hawke's RAC clamping system is also fully Inspectable when positioned on the cable.

4 Cable Tightening Guide

To help address issues with the overtightening of cable glands and the resultant damage to cables and seals, Hawke International has developed the patented INBUILT TIGHTENING GUIDE. Removing the need for fiddly measuring systems, the guide provides a permanent visual indication of the gland tightness through installation, inspection and maintenance. The gland is permanently marked with various lines/numbers indicating the correct tightening level related to the cable diameter. The backnut, once tightened to the line corresponding to the cable diameter, ensures there is no cable damage whilst still maintaining IP and pull-out.

5 Inspectable Deluge Seal

Hawke's Inspectable deluge seal offers IP66 and IP67 sealing and is certified as 'deluge proof' by ITS in accordance with DTS01. Indeed, Hawke's deluge seal is so good that it exceeds the expectations of the offshore industry by not only preventing ingress into the equipment, but also into the cable gland, which prevents corrosion of the cable armour.

6 Compound Free, Instant Barrier Seal

The PSG553 RAC (Punched Seal Gland) provides market leading installation and inspection time. Simply pass the individual cores through the punched seal and tighten. Fully inspectable and no waiting time – irrespective of temperature, location or installation position.

The First Globally Certified, Fully Inspectable, Elastomeric Compound Pot

Why a silicone compound pot?

At Hawke, we prioritise complete inspectability of all seals and explosion protection features within our products. The search for inspectability pushed us toward the unique transparent silicone compound pot in which the compound is visible both as it is being installed and once installation is complete.

How does it work?

A traditional metallic compound pot uses a flamepath to dissipate the energy of an ignition. The flamepath is a tightly controlled clearance between the pot and the gland housing. If this clearance is too **large** there is a risk of ignition. If this clearance is too **small** the pot won't fit into the gland. Any scratches or damage renders the gland useless. Our silicone pot works by being compressed when installed so the flamepath gap is always zero.

How was the silicone compound pot tested and certified?

The compound pot and resin have been certified in accordance with ATEX/ IECEx 60079 and UL2225. They have been through rigorous testing processes including and not limited to chemical exposure, hydrostatic pressure, thermal ageing and explosion testing.

What are the benefits of the silicone compound pot over a brass compound pot?

- When terminating the barrier gland the resin is visible to the installer, so the process is much more controlled and visible. Any issues such as voids or underfilling can be immediately addressed before the compound cures.
- The resin is visible through the compound pot and as such can be inspected without the product being destroyed. Traditional metallic compound pots must be cut off to inspect, discarded and then remade with a new gland.
- If the flamepath surface of a metallic pot is damaged, or in glands where the entry is used to form the flameproof seal, the whole assembly must be cut off the cable and replaced. If damage occurs to the silicone compound pot, it can be replaced.

100% visibility.
Inspect installed glands with zero destruction.

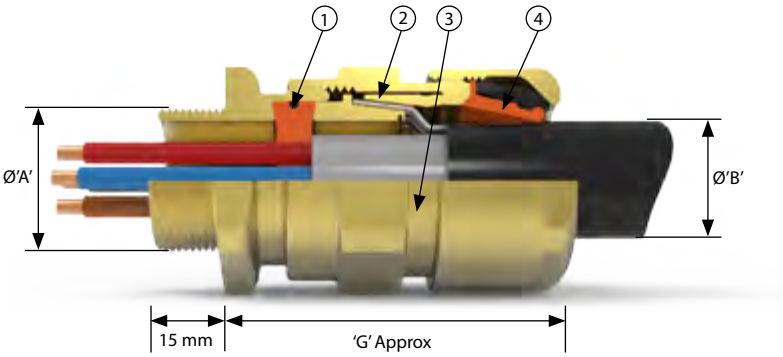
The Difference is Clear.

MADE IN BRITAIN

PSG 553 RAC

Flameproof, Increased Safety, Dust Protection & Restricted Breathing
Dual Certified ATEX / IECEx

International Approvals



- 1 Provides a barrier seal to the individual insulated cores within the cable and prevents entry of the products of an explosion into the cable. The required number of holes for the cores are punched in the seal by a special tool to suit core size.
- 2 Provides armour clamping using one clamping arrangement for all armour/braid types
- 3 Provides a cable retention and low smoke and fume, zero halogen seal onto the cables outer sheath

The PGS/553/RAC dual certified Exe/Exd gland offers an instant barrier seal around the individual cable cores, with the silicon seal forming a barrier around the individual cores of a cable. This results in unparalleled speed of installation, inspection and flexibility, with no need for compounds or resin to achieve the Exd barrier seal, no curing time and instant gland completion.

Conduit Cable Glands

Hawke International conduit cable glands offer an opportunity to terminate fixed and flexible conduit in a hazardous area, providing a female running coupler for gland or conduit entry maintaining both Exe and Exd protection concepts along with protecting against ingress of water and dust.

● QSP 2-part Hand Mix Putty

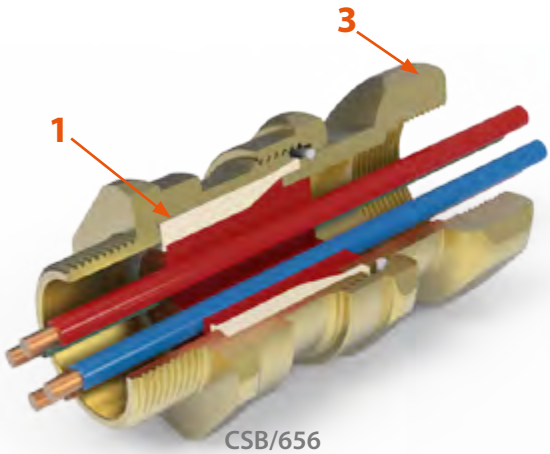
Simple to use with a cure time from 30 minutes. Particularly useful where termination space is limited or cables are running horizontally to the installation area. Can be inspected and repaired if necessary, allowing for the very highest level of safety.

● Instant Barrier Seal

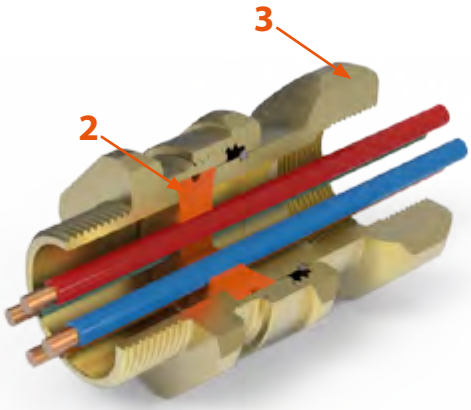
No resin. No mixing. No cure time.

The PSG474 (Punched Seal Gland) provides market leading installation and inspection time. Simply pass the individual cores through the punched seal and tighten. Fully inspectable and no waiting time – irrespective of temperature, location or installation position.

Features



CSB/656



SB/474

1 Unique Inspectable Compound Chamber

The revolutionary Hawke compound chamber has been designed with inspectability in mind. With a unique clear non-metallic compound chamber for both IEC and NEC applications, the barrier seal can be made using either a QSP quick setting 2-part hand-mixed putty, or a liquid injectable and fast curing resin, allowing for faster installation time than traditional 2-part compounds. The transparent compound chamber allows full visibility of the flameproof seal during installation and inspection making the ExPress barrier resin unparalleled as a global solution.

2 No resin. No mixing. No cure time.

The PSG474 (Punched Seal Gland) provides market leading installation and inspection time. Simply pass the individual cores through the punched seal and tighten. Fully inspectable and no waiting time – irrespective of temperature, location or installation position.

3 Female Running Coupler

Provides a female running coupler for cable gland or conduit entry. Seals conductors at entry to enclosure via conduit or enables an existing cable gland to be converted to a barrier type cable gland.

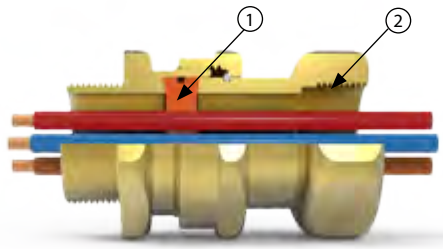
SB/474

Flameproof, Increased Safety, Dust Protection
Certified ATEX/IECEx

International Approvals



■1 Provides a barrier seal to the individual insulated cores within the cable and prevents entry of the products of an explosion into the cable. The required number of holes for the cores are punched in the seal by a special tool to suit core size.

■2 Female running coupler for cable gland or conduit entry. Can be used to upgrade standard non-barrier gland into a flameproof Exd barrier gland

For outdoor or indoor use, the SB474 is also for particular use with cables that are not effectively filled, compact and/or circular, have tape bedding or have hygroscopic fillers. Also, with cables that exhibit 'Cold Flow' characteristics.

HUBBELL Harsh & Hazardous

NEC® Compliant Cable Glands

The range of Hawke International NEC® Compliant cable glands provide a seal around the individual cores of a cable to maintain the flameproof integrity of Exd equipment.

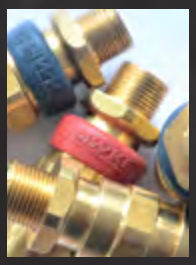
These glands meet the requirements of NEC® and employ a compound seal around each core to prevent the migration of an explosion from within a piece of flameproof equipment to the outside atmosphere. Hawke International has a comprehensive, and UNIQUE range of barrier glands offering numerous features and benefits not to be found from other manufacturers.

2 Seal Options - BOTH FULLY INSPECTABLE!

Our NEC® Compliant cable glands are available with our quick setting 2-part resin, or an injectable liquid seal - ExPress, both of which offer full inspection of the seal in-situ:

● 2-part Hand Mix Compound

Simple to use with a cure time from 30 minutes. Particularly useful where termination space is limited or cables are running horizontally to the installation area. Can be inspected and repaired if necessary, allowing for the very highest level of safety.



● ExPress Barrier Resin

A liquid injectable and fast curing resin, allowing for faster installation time than traditional 2-part compounds. Utilising a unique clear compound chamber allowing full visibility of the flameproof seal during installation and inspection, the ExPress barrier resin is unparalleled as a global solution.

The First Globally Certified, Fully Inspectable, Elastomeric Compound Pot

Why a silicone compound pot?

At Hawke, we prioritise complete inspectability of all seals and explosion protection features within our products. The search for inspectability pushed us toward the unique transparent silicone compound pot in which the compound is visible both as it is being installed and once installation is complete.

How does it work?

A traditional metallic compound pot uses a flamepath to dissipate the energy of an ignition. The flamepath is a tightly controlled clearance between the pot and the gland housing. If this clearance is too **large** there is a risk of ignition. If this clearance is too **small** the pot won't fit into the gland. Any scratches or damage renders the gland useless. Our silicone pot works by being compressed when installed so the flamepath gap is always zero.

How was the silicone compound pot tested and certified?

The compound pot and resin have been certified in accordance with ATEX/ IECEx 60079 and UL2225. They have been through rigorous testing processes including and not limited to chemical exposure, hydrostatic pressure, thermal ageing and explosion testing.

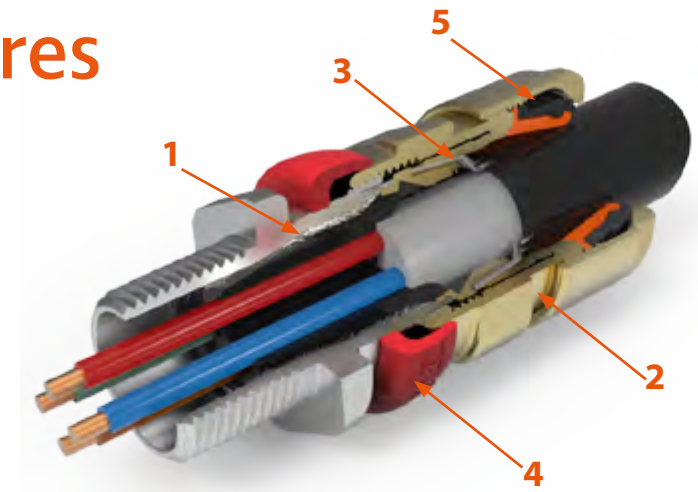
What are the benefits of the silicone compound pot over a brass compound pot?

- When terminating the barrier gland the resin is visible to the installer, so the process is much more controlled and visible. Any issues such as voids or underfilling can be immediately addressed before the compound cures.
- The resin is visible through the compound pot and as such can be inspected without the product being destroyed. Traditional metallic compound pots must be cut off to inspect, discarded and then remade with a new gland.
- If the flamepath surface of a metallic pot is damaged, or in glands where the entry is used to form the flameproof seal, the whole assembly must be cut off the cable and replaced. If damage occurs to the silicone compound pot, it can be replaced.

100% visibility.
Inspect installed glands with zero destruction.

The Difference is Clear.

Features



753

1 The World's Only Non-Metallic, Fully Inspectable Flameproof Barrier Seal

The barrier seal can be made using either a QSP quick setting 2-part hand-mixed putty, or a liquid injectable and fast curing resin, allowing for faster installation time than traditional 2-part compounds. The transparent compound chamber allows full visibility of the flameproof seal during installation and inspection making the ExPress barrier resin unparalleled as a global solution.

2 Cable Tightening Guide

To help address issues with the overtightening of cable glands and the resultant damage to cables and seals, Hawke International has developed the patented INBUILT TIGHTENING GUIDE. Without the need for fiddly measuring systems, the guide provides a permanent visual indication of the gland tightness through installation, inspection and maintenance. The gland is permanently marked with various lines/numbers indicating the correct tightening level related to the cable diameter. The backnut, once tightened to the line corresponding to the cable diameter, ensures there is no cable damage whilst still maintaining IP and pull-out.

3 The Original Reversible Armour Clamp

The original RAC clamping system was invented by Hawke over 10 years ago and is a well established proven performer in all conditions. Simply by reversing the clamping ring, the cable gland can adjust to accommodate all types of cable armour or braid. Unlike many of our competitors, the correct stamping orientation is marked clearly with the armour size and backed up by the presence of a groove in the component. Hawke's RAC clamping system is also fully Inspectable when positioned on the cable.

4 Inspectable Deluge Seal

Hawke's Inspectable deluge seal offers IP66 and IP67 sealing and is certified as 'deluge proof' by ITS in accordance with DTS01. Indeed, Hawke's deluge seal is so good that it exceeds the expectations of the offshore industry by not only preventing ingress into the equipment, but also into the cable gland, which prevents corrosion of the cable armour.

5 Unique Rear Sealing System

This arrangement offers IP66, IP67, IP68 (30 metres for 7 days), NEMA 4X and Deluge (DTS01) Ingress Protection. The seal is manufactured from a silicone material, has LSFZH properties, is ozone and oil resistant and is suitable for use at both high and low temperatures. The Rear Sealing System covers the entire range of cable diameters with out the need for special seals and the cable acceptance range is stamped on the backnut for ease of inspection. The backnut can be hand tightened, with only one further spanner turn required to ensure IP66, IP67, IP68 and NEMA 4X.

International Approvals

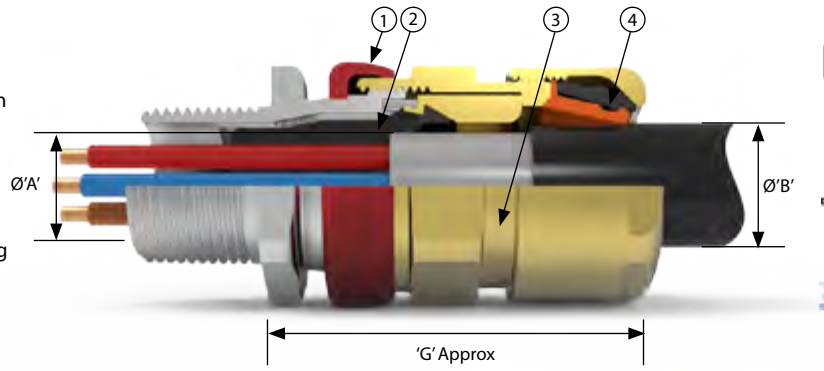
- 1 Inspectable Deluge Seal
  - Offering IP66, IP67, IP68 & IP69 Ingress Protection
- 2 Transparent Elastomeric Fully Inspectable Compound Pot – compatible with both injectable resin and 2 part compound
- 3 Patented Cable Gland Tightening Guide
  - Helps prevent damage caused by over tightening
- 4 Unique Rear Seal - Offering ultimate sealing over an extremely wide cable acceptance range



The NEC® Compliant 710 dual certified Exe/Exd cable gland is suitable for use with the following cable types: TC-ER-HL, TC-ER, PLTC, PLTC-ER, ITC, ITC-HL & ITC-ER (see technical data for more information). The gland provides a barrier seal around the individual cores within the cable and prevents entry of the products of an explosion into the cable. The gland features the worlds only NEC® certified transparent elastomeric fully inspectable compound chamber

HUBBELL Harsh & Hazardous

Industrial Cable Glands

The Hawke International range of Industrial Cable Glands retain many of the patented features found in our hazardous area glands.

Designed for the harshest environments and tested to the latest standards, our range of Industrial Cable Glands are used in a multitude of environments - offshore wind, petrochemical, rail, heavy industry, data centres, pharmaceutical and many, many more.

FIREMATE™

The **FireMate** cable gland range is tested to the latest industrial and fire standards (BS EN 61984, voltage directive LVD 2014/35/EU, BSEN50200:2006 and BS8434-2:2003 + A2 2009) and will maintain its structural integrity in the world's most severe environments.

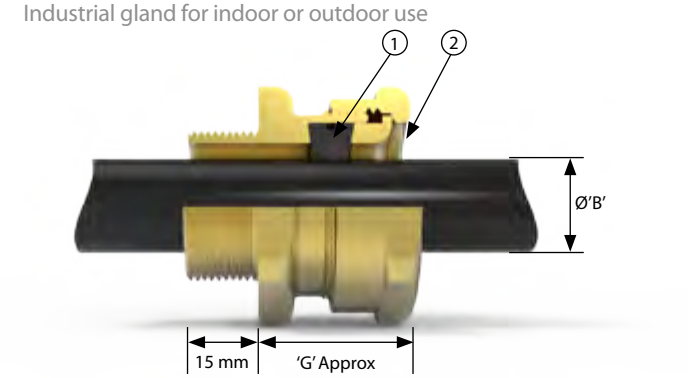
Ideal for underground and overground rail networks, marine safety and commercial and public building applications.

MADE IN BRITAIN

CE

121

Industrial gland for indoor or outdoor use



- 1 Elastomeric seal on cable inner sheath
- 2 Rounded Cable entry to prevent cable damage

The 121 industrial cable gland is intended for use on non-armoured elastomer and plastic insulated cables in indoor and outdoor applications. This cable gland may be used with braided cables where the braid and outer sheath pass into the enclosure. The braid must then be suitably terminated inside the enclosure.

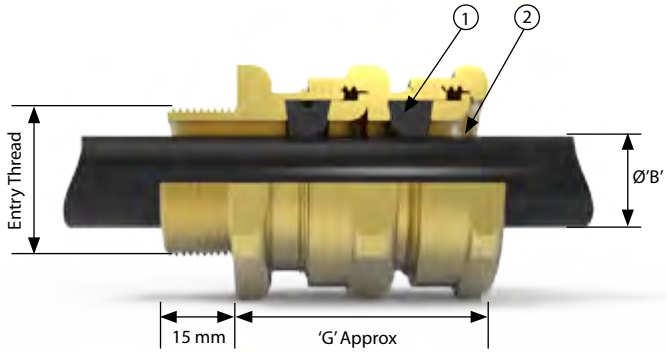
123

Industrial gland for indoor or outdoor use

MADE IN BRITAIN

CE

- 1 Elastomeric seal on cable inner sheath
- 2 Rounded Cable entry to prevent cable damage



The 123 dual seal industrial cable gland incorporates two independent seals and is intended for use on non-armoured elastomer and plastic insulated cables in indoor or outdoor applications. This cable gland may be used with braided cables where the braid and outer sheath pass into the enclosure. The braid must then be suitably terminated inside the enclosure . The two seals provide superior cable retention over standard unarmoured cable glands.

Cable Gland Selection Table

Size Ref.	Entry Thread Size 'A'		Cable Acceptance Details				'G'	Hexagon Dimensions	
			Outer Sheath 'B'						
	Metric	NPT* Standard	Standard Seal		Alternative Seal (S)			Across Flats	Across Corners
			Min	Max	Min	Max

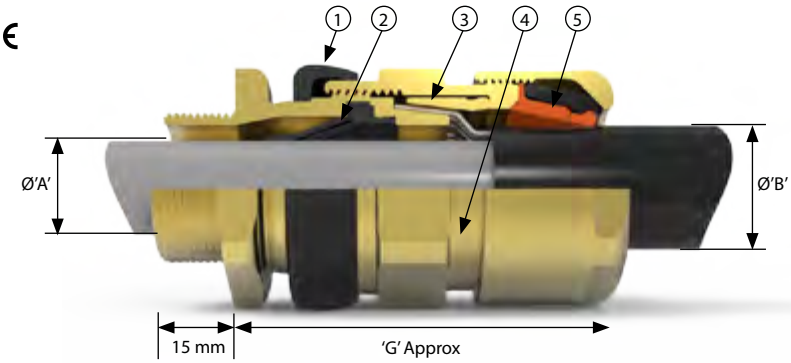
153/UNIV

Industrial gland for indoor or outdoor use



- 1 Inspectable Deluge Seal
  - Offering IP66, IP67, IP68 & IP69 Ingress Protection
- 2 Passive diaphragm seal
  - Suitable for cables exhibiting 'Cold Flow.' Fully inspectable
- 3 Reversible Armour Clamp - For all types of armour and braid
- 4 Patented Cable Gland Tightening Guide
  - Helps prevent damage caused by over tightening
- 5 Unique Rear Seal - Offering ultimate sealing over an extremely wide cable acceptance range

The industrial 153/Universal Cable Gland is robust and for use with single wire armour 'W', wire braid 'X', steel tape armour 'Z', elastomer and plastic insulated cables. For particular use with cables that exhibit 'Cold Flow' characteristics.

114

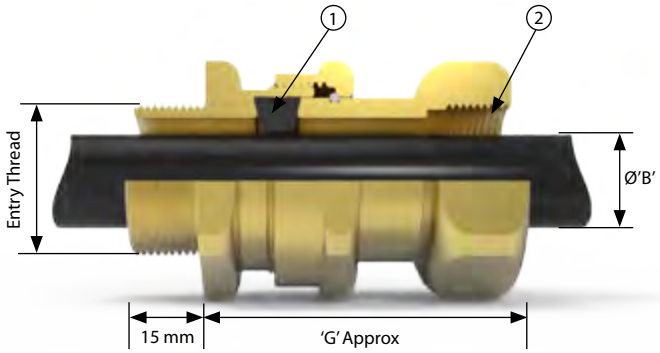
Industrial gland for indoor or outdoor use

MADE IN BRITAIN

CE

■1 Elastomeric seal on cable inner sheath

■2 Female running coupler for cable gland or conduit entry



The 114 industrial cable gland offers a female running coupler and a seal onto the cable outer sheath for use with non-armoured elastomer and plastic insulated cables installed in conduit. May also be used with braided cables under certain conditions - See technical section for installation rules and regulations.

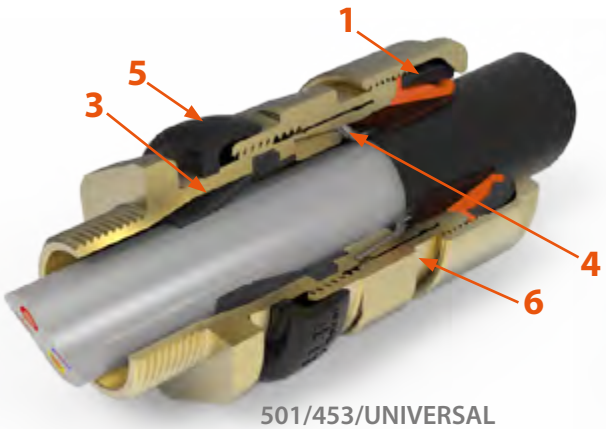
Mining Cable Glands

Hawke Cable glands for mining applications are designed to withstand much harsher operating conditions than equipment used in surface applications.

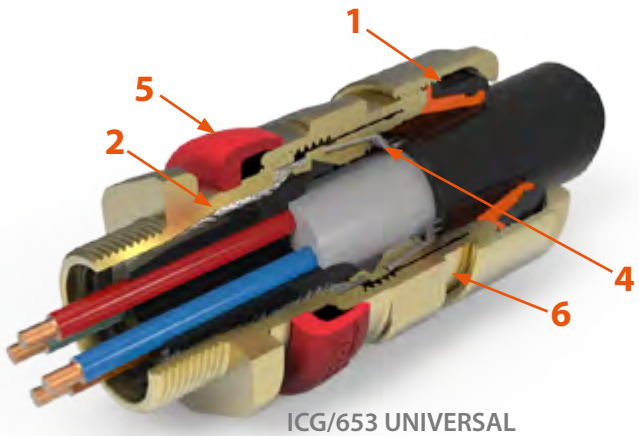
The mining industry was the birthplace for much of todays hazardous area certification. It was in these extremely tough and hostile mining environments that many modern day explosion proof products were born and this is also true for our range of cable glands.

Having serviced the mining industry for over 50 years, Hawke mining glands are recognised for their durability and ease of use.

Features



501/453/UNIVERSAL



ICG/653 UNIVERSAL

1 Unique Rear Sealing System

This arrangement offers IP66, IP67, IP68 (30 metres for 7 days), NEMA 4X and Deluge (DTS01) Ingress Protection. The seal is manufactured from a silicone material, has LSFZH properties, is ozone and oil resistant and is suitable for use at both high and low temperatures. The Rear Sealing System covers the entire range of cable diameters with out the need for special seals and the cable acceptance range is stamped on the backnut for ease of inspection. The backnut can be hand tightened, with only one further spanner turn required to ensure IP66, IP67, IP68 and NEMA 4X.

2 Unique Inspectable Compound Chamber

The revolutionary Hawke compound chamber has been designed with inspectability in mind. With a unique clear non-metallic compound chamber for both IEC and NEC application, the barrier seal can be made using either a QSP quick setting 2-part hand-mixed putty, or a liquid injectable and fast curing resin, allowing for faster installation time than traditional 2-part compounds. The transparent compound chamber allows full visibility of the flameproof seal during installation and inspection making the ExPress barrier resin unparalleled as a global solution.

3 Zero Cable Damage

The unique Hawke diaphragm sealing system does not damage cable which exhibit 'Cold Flow' characteristics. The diaphragm type seal is the only elastomeric seal to comply fully with IEC/EN 60079-14 and is therefore suitable on effectively filled 'cold flow' cables which would otherwise require barrier style cable glands. The Hawke diaphragm seal is also unique in that it is the only flameproof elastomeric seal that can be visually inspected in operation – a real benefit to inspectors.

4 The Original Reversible Armour Clamp

The original RAC clamping system was invented by Hawke over 10 years ago and is a well established proven performer in all conditions. Simply by reversing the clamping ring, the cable gland can adjust to accommodate all types of cable armour or braid. Unlike many of our competitors, the correct stamping orientation is marked clearly with the armour size and backed up by the presence of a groove in the component. Hawke's RAC clamping system is also fully Inspectable when positioned on the cable.

5 Inspectable Deluge Seal

Hawke's Inspectable deluge seal offers IP66 and IP67 sealing and is certified as 'deluge proof' by ITS in accordance with DTS01. Indeed, Hawke's deluge seal is so good that it exceeds the expectations of the offshore industry by not only preventing ingress into the equipment, but also into the cable gland, which prevents corrosion of the cable armour.

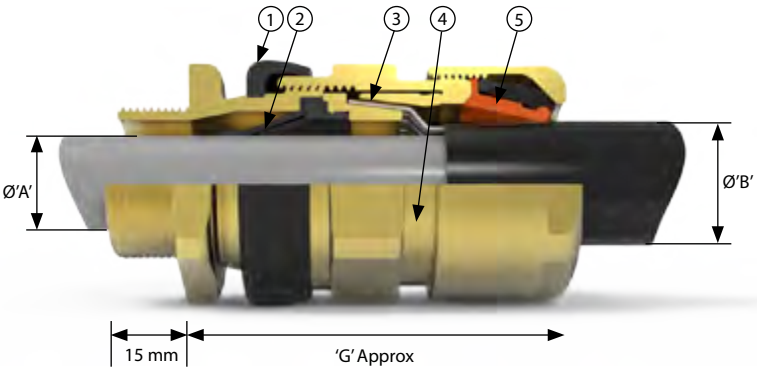
6 Cable Tightening Guide

To help address issues with the overtightening of cable glands and the resultant damage to cables and seals, Hawke International has developed the patented INBUILT TIGHTENING GUIDE. Without the need for fiddly measuring systems, the guide provides a permanent visual indication of the gland tightness through installation, inspection and maintenance. The gland is permanently marked with various lines/numbers indicating the correct tightening level related to the cable diameter. The backnut, once tightened to the line corresponding to the cable diameter, ensures there is no cable damage whilst still maintaining IP and pull-out.

MADE IN BRITAIN

453/UNIV GP1

Mining, Flameproof, Increased Safety
Certified ATEX / IECEx



1. Inspectable Deluge Seal - Offering IP66, IP67, IP68 & IP69 Ingress Protection
2. Passive diaphragm seal - Suitable for cables exhibiting 'Cold Flow.' Fully inspectable
3. Reversible Armour Clamp - For all types of armour and braid
4. Patented Cable Gland Tightening Guide - Helps prevent damage caused by over tightening
5. Unique Rear Seal - Offering ultimate sealing over an extremely wide cable acceptance range

International Approvals

The 453 Universal group I mining Cable Gland is dual certified Exe/Exd, robust and for use with single wire armour 'W', wire braid 'X', steel tape armour 'Z', elastomer and plastic insulated cables. For particular use with cables that exhibit 'Cold Flow' characteristics, with a fully inspectable passive inner diaphragm seal.

Accessories

Connection Solutions

To easily overcome fitting issues, we have produced an extensive range of thread adaptors, reducers and fittings. These enable interconnection of dissimilar sized connections on cable glands and enclosures while remaining compliant with international standards and approvals. This ensures that the integrity of equipment and safety in hazardous environments is not compromised.

Designed and Manufactured in the UK

All of our cable glands and related accessories are designed and manufactured from our world-class facility in Manchester, UK where they have been produced for over 60 years.

375

Domed Head Stopping Plug

MADE IN BRITAIN

Selection Table

Thread Size	'S' Dia (mm)	Allen Key (mm)
M16	23	8
M20	27.5	10
M25	32	10
M32	39	10
M40	49	10
M50	59	10
M63	72	10
M75	84	10

Ordering Information

Product	Thread Size	Material	Finish
375	M32	N/A	N/A

General Information

- Manufactured in Polyamide with Nitrile O-Ring.
- M16 to M75 as standard.
- Thread length is 15mm as standard.
- Metric entry threads are 1.5mm pitch as standard.
- Suitable for use in Zone 1, Zone 2, Zone 21 and Zone 22.
- Construction and Test Standards: IEC/EN 60079-0, IEC/EN 60079-7 and IEC/EN 60079-31.
- Ingress Protection: IP66.
- Assembly Instruction Sheet: AI 410.

Certification Details

- Increased Safety Exe IIC Gb, Extb IIIC Db, II 2GD.
- Certificate No's: Baseefa 12ATEX0095X and IECEx BAS 12.0065X.
- Ex TC RU C-GB.ГБ05.B.00750 EAC
- Operating Temperature Range -60°C to +75°C.
- Group II and III.

390

Hexagon Head Stopping Plug

MADE IN BRITAIN

Selection Table

Thread Size	Length of Thread (mm)	Across Flats (mm)	Across Corners (mm)
M16	15	24	26.5
M20	15	30	32.5
M25	15	36	39.5
M32	15	46	50.5
M40	15	55	60.6
M50	15	65	70.8
M63	15	80	88
M75	15	95	104

Ordering Information

Product	Thread Size	Material	Finish
390	M32	Brass	Nickel Plated

Note: When ordering metric threads larger than M75, include the thread pitch details

General Information

- Manufactured in Brass, Nickel Plated Brass, Steel, Nickel Plated Steel and Stainless Steel. (Aluminium for Group II use only).
- M16 to M130 as standard.
- M16 to M75 are 1.5mm pitch as standard.
- M80 to M130 are 2.0mm pitch as standard (20mm thread length).
- Other parallel thread options available on request, including BSPP, PG, ET and NPSM. NPT threads also available.
- Suitable for use in Zone 1, Zone 2, Zone 21, Zone 22 and mining applications.
- Construction and Test Standards: IEC/EN 60079-0, IEC/EN 60079-7 and IEC/EN 60079-31.
- Ingress Protection: IP66.
- Assembly Instruction Sheet: AI 412.

Certification Details

- Increased Safety Exe I Mb, Exe IIC Gb, Extb IIIC Db, I M2/II 2GD.
- Certificate No's: Baseefa 11ATEX0157X and IECEx BAS 11.0079X.
- Ex TC RU C-GB.ГБ05.B.00750 EAC
- Operating Temperature Range: Nitrile 'O' Ring fitted as standard -60°C to +80°C Silicone Option -60°C to +160°C.
- Group 1, II and III.

MADE IN BRITAIN

383

Earth Lead Adaptor (Male to Female)

General Information

- Manufactured in Brass, Nickel Plated Brass and Stainless Steel.
- PVC Insulated Cable as standard, (Optional LSOH cable).
- M20 to M75 as standard, other thread forms available on request.
- Different thread sizes and types are permitted each end of the adaptor. The thread sizes may differ by one size only.
- If longer cable lengths than standard are required, advise length in millimeters.
- Suitable for use in Zone 1, Zone 2, Zone 21 and Zone 22.
- Construction and Test Standards: IEC/EN 60079-0, IEC/EN 60079-7 and IEC/EN 60079-31.
- Ingress Protection: IP66. (when installed with a Hawke washer)
- Assembly Instruction Sheet: AI 413.

Selection Table

Thread Size Male / Female	Across Flats (mm)	Across Corners (mm)	Cable Length (mm)	Cable Size (sq. mm)
M20 / M20	24	26.5	250	4
M25 / M25	30	32.5	250	4
M32 / M32	36	39.5	250	6

Adaptor/Reducer (Male to Female)

General Information

- Manufactured in Brass, Nickel Plated Brass, Steel, Nickel Plated Steel and Stainless Steel. (Aluminium for Group II use only).
- M12 to M130 (¾" NPT to 6" NPT) as standard.
- Other thread options available on request, including BSPP, BSPTr, PG, ET, NPT and NPSM.
- Up to two step thread sizes above the male thread on the adaptor is permitted.
- Suitable for use in Zone 1, Zone 2, Zone 21 and Zone 22.
- Construction and Test Standards: IEC/EN 60079-0, IEC/EN 60079-1 IEC/EN 60079-7 and IEC/EN 60079-31.
- Ingress Protection: IP66. (when installed with a Hawke washer)
- Assembly Instruction Sheet: AI 380.

Certification Details

- Increased Safety and Flameproof Exe IMb, Exd IMb, Exe IIC Gb, Exd IIC Gb, Extb IIIC Db, IM2 / II 2GD.
- Certificate No's: Baseefa 11ATEX0067X and IECEx BAS 11.0037X.
- Ex TC RU C-GB.ГБ05.B.00750 EAC
- *Operating Temperature Range -60°C to +200°C.
- Group I, II and III.

** The operating temperature may have to be reduced if an IP washer is used*

Ordering Information

Product	Thread Size	Material	Finish
476/Adaptor	M20 Male x 1" NPT Female	Brass	Nickel Plated

Ordering Information

Product	Thread Size	Material	Finish
476/Reducer	M32 Male x M20 Female	Stainless Steel	N/A

Always state the male thread first.
Note: When ordering metric threads larger than M75, include the thread pitch details.

490

Swivel In-Line Union with Lockstop (M to F)

MADE IN BRITAIN

Selection Table

Male Thread Size	Thread Pitch (mm)	Female Thread Size	Thread Pitch (mm)	Thread Length (mm)	Typical A/F (mm) 'E'	Typical A/C (mm) 'F'
M16	1.5	M16	1.5	16	36	39.5
M20	1.5	M20	1.5	16	36	39.5
M25	1.5	M25	1.5	16	46	50.5
M32	1.5	M32	1.5	16	46	50.5
M40	1.5	M40	1.5	16	65	70.8
M50	1.5	M50	1.5	16	65	70.8
M63	1.5	M63	1.5	16	95	104
M75	1.5	M75	1.5	16	95	104

Note: Different thread sizes and types are permitted at each end of the inline swivel, a step of one thread size is permitted between the two threads.
Where different thread types / sizes are supplied, the overall dimensions of the inline swivel may increase in size.

Ordering Example:

Product	Thread Size	Pitch	Material	Finish
490	M32 Male x M32 Female	1.5 mm	Brass	Nickel Plated

Always state the male thread first.

General Information

- Manufactured in Brass, Nickel Plated Brass, Steel, Nickel Plated Steel and Stainless Steel.
- M16 to M75 as standard.
- Other parallel male thread options available on request, including BSPP, PG, ET and NPSM.
- NPT female threads can also be supplied in sizes ranging from ½" to 3".
- Suitable for use in Zone 1, Zone 2, Zone 21, Zone 22 and mining applications.
- Construction and Test Standards: IEC/EN 60079-0, IEC/EN 60079-1 IEC/EN 60079-7 and IEC/EN 60079-31.
- Integral Silicone O Ring seal.
- Ingress Protection: IP66. (when installed with a Hawke washer)
- Assembly Instruction Sheet: AI 416.

Certification Details

- Increased Safety & Flameproof Exe IMb, Exd IMb, Exe IIC Gb, Exd IIC Gb, Extb IIIC Db, IM2 / II 2GD.
- Certificate No's: Sira 11ATEX1347U and IECEx SIR 11.0152U.
- Ex TC RU C-GB.ГБ05.B.00750 EAC
- *Operating Temperature Range -60°C to +100°C.
- Group I, II and III.

** The operating temperature may have to be reduced if an IP washer is used*

- NPT female threads can also be supplied in sizes ranging from ½" to 3".
- Suitable for use in Zone 1, Zone 2, Zone 21, Zone 22 and mining applications.
- Construction and Test Standards: IEC/EN 60079-0, IEC/EN 60079-1 IEC/EN 60079-7 and IEC/EN 60079-31.
- Ingress Protection: IP66. (when installed with a Hawke washer)
- Assembly Instruction Sheet: AI 430.

Selection Table

Female Thread Size	Thread Pitch (mm)	Female Thread Size	Thread Pitch (mm)	Female Thread Length (mm)	Typical Block Size (mm)
M20	1.5	M20	1.5	16	27
M25	1.5	M25	1.5	16	35
M32	1.5	M32	1.5	16	42
M40	1.5	M40	1.5	16	50
M50	1.5	M50	1.5	16	60
M63	1.5	M63	1.5	16	78
M75	1.5	M75	1.5	16	90

Note: Different thread sizes and types are permitted at each end of the elbow, a step of one thread size is permitted between the two threads.
Where different thread types / sizes are supplied, the overall dimensions of the elbow may increase in size.

Certification Details

- Flameproof Exd IIC Gb, Increased Safety Exe IIC Gb and Dust Extb IIIC Db II 2GD.
- Certificate No's: Baseefa 14ATEX0014U and IECEx BAS 14.0002U.
- Ex TC RU C-GB.ГБ05.B.00750 EAC
- *Operating Temperature Range -60°C to +200°C.
- Group II and III.

** The operating temperature may have to be reduced if an IP washer is used*

Ordering Example:

Product	Thread Size	Pitch	Material	Finish
496	M32 Female x M32 Female	1.5 mm	Brass	Nickel Plated

Always state the male thread first.

MADE IN BRITAIN

481

Union (M to F)

General Information

- Manufactured in Brass, Nickel Plated Brass, Steel, Nickel Plated Steel and Stainless Steel.
- M16 to M75 as standard.
- Other parallel thread options available on request, including BSPP, PG, ET and NPSM.
- NPT female threads can also be supplied in sizes ranging from ½" to 3".
- Suitable for use in Zone 1 and Zone 2.
- Construction and Test Standards: IEC/EN 60079-0 and IEC/EN 60079-1.
- Ingress Protection: IP54.
- Assembly Instruction Sheet: AI 407.

Selection Table

Male Thread Size	Thread Pitch (mm)	Female Thread Size	Thread Pitch (mm)	Thread Length (mm)	Across Flats (mm)	Across Corners (mm)
M16	1.5	M16	1.5	16	30	32.5
M20	1.5	M20	1.5	16	36	39.5
M25	1.5	M25	1.5	16	46	50.5
M32	1.5	M32	1.5	16	46	50.5
M40	1.5	M40	1.5	16	55	60.5
M50	1.5	M50	1.5	16	80	88
M63	1.5	M63	1.5	16	80	88
M75	1.5	M75	1.5	16	95	104

Note: Different thread sizes and types are permitted at each end of the adaptor, a step of one thread size is permitted between the two threads.
Where different thread types / sizes are supplied, the overall dimensions of the adaptor may increase in size.

Certification Details

- *Operating Temperature Range -55°C to +95°C.
- Group I, II and III.

** The operating temperature may have to be reduced if an IP washer is used*

MADE IN BRITAIN

SHROUDS

For Hawke Cable Glands

General Information

- Available to fit Hawke gland sizes Os to J.
- Suitable for outdoor or indoor use.
- For fitting over cable glands when additional environmental and corrosion protection is required.
- Manufactured in Low Smoke and Fume, Halogen Free TPE material with excellent UV, ozone and weathering resistance.
- Black supplied as standard, other colour options are available, please contact the Hawke Sales Team for further information.

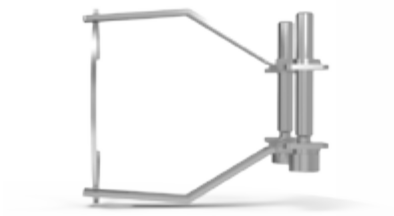
Ordering Example:

Product	Thread Size
Shroud	C

MADE IN BRITAIN

PULL-OUT CLAMP

For Hawke Cable Glands



General Information

- Integral cable clamping for additional strain relief
- Retro-fit to installed glands
- Captive fittings for easy installation
- Manufactured in Stainless Steel as standard

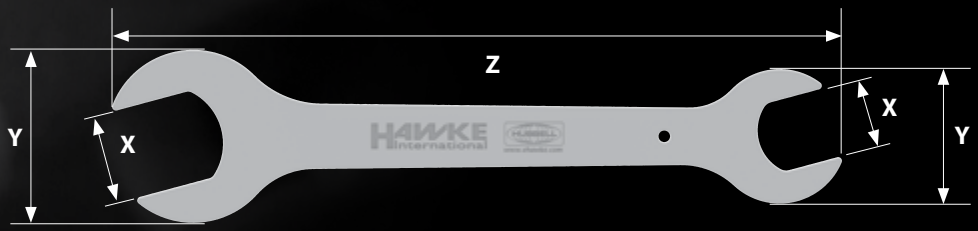
GLAND SPANNERS

For Hawke Cable Glands

MADE IN BRITAIN

Type 1
see table



Type 2
see table

The Hawke range of Gland Spanners have been designed for use with Hawke's market-leading range of harsh and hazardous area, industrial, mining and explosive area Cable Glands.

Our Gland spanners have been engineered to minimise the accidental injury caused by slippage, as is commonly found with adjustable spanners or wrenches. **Individually sized for use with the full range of Hawke cable glands.**

Gland Spanner Selection Table

Material	Mild steel zinc plated							
Type	1		1		2	2	2	2
Dimension	O	A	B	C	C2	D	E	F
A/F (X)	24	30	36	46	55	65	80	95

Head Size (Y)	46	56	70	90	110	120	150	170
Overall Length (Z)	302.5		370.5		496.5	435.5	486.5	423.5

MADE IN BRITAIN

Exe ENCLOSURES

Plastic

Hawke's range of Plastic Enclosures offer an operating temperature range from -60°C to +75°C with one-piece captive silicone gaskets offering excellent ingress resistance of up to IP66, IP67 and DTS01 deluge protection.

The innovative **5-series enclosures** utilise an innovative clamshell design providing unrivalled access for both installation and inspection. In tests, this design can save up to a 45% time saving in installation alone as a direct result of this unique design.

The **PL6 range** offers an industry leading impact resistance of up to 20Nm and an extremely high corrosion resistance.

Hawke International have been supplying **Plastic Enclosures** into the Hazardous Area market for over 40 years.

Exe ENCLOSURES

Stainless Steel

MADE IN BRITAIN

Boasting robust stainless steel construction and electropolished surface finish, the 3 range options, **EJB, S-Series and EA Range** offer unrivalled flexibility to the user and installer.

EJB – Our economy range of enclosures – highly durable, high IP and available in 3 footprints. Simple, yet highly effective.

S-Series – Extremely versatile 316L stainless steel enclosures, with an extensive range of sizes available. Globally certified offering true global application.

EA Range – Designed with productivity in mind, the Exe Easy Access range allows for far faster installation and inspection times with its unique sloped face design and cut-away sides. This, plus un-paralleled ease of access, amazing ingress protection, removable hinged lid makes the EA enclosure an extremely cost effective solution.

Hawke's **Exe Stainless Steel Enclosures** have been serving the Harsh and Hazardous industries for decades.

MADE IN BRITAIN

HAZCON CONTROL STATIONS

GRP and Stainless Steel

Developed to exceed customer expectations, the Control Station range is for use wherever potential explosion hazards exist (Zone 1/21 & 2/22) and boasts a huge selection of pushbuttons, ammeters and selector switches.

Available in both high impact GRP (Glass Reinforced Antistatic Polymer) and 316L Stainless Steel and certified to ATEX/IECEx and UL, the range can also be marked cULus, EAC and Inmetro – a true globally certified range.

- IP66 Ingress protection
- 5 enclosure size offerings
- High switch contact blocks
- AC/DC compatible LED's
- External mounting feet

Ex CONNECTORS

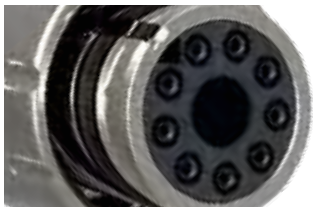
For Harsh & Hazardous Environments

MADE IN BRITAIN

Hawke International has over 50 years experience in Hazardous Area connection systems, from instrumentation, Fiber Optic to low/medium power applications.

FibreEx

Fibre Optic connectors for use in extreme hazardous environments



InstrumEx

Live make-and-break connectors for Ex d applications up to 250V

ControlEx

Multi-pin, globally approved Ex d connectors up to 1000V

PowerEx

High Power connectors for up to 780A and 1000V *(other voltages available on request)*
